Mail.dat Premium Option Now with **job updating** functionality

For high-efficiency mailing reports and a gateway to PostalOne! convenience.

The USPS® *PostalOne!*® system eliminates the need for hard-copy postal forms, and the newly enhanced Mail.dat option for Mail Manager 2010 lets you take advantage of *PostalOne!* like never before.

The Mail.dat option uses this industry-standard format to streamline USPS Qualification Reports into ultra-compact electronic data that replace traditional hard copy documentation—postal presort-created packages and containers, and more.

Transmittable via e-mail or disk, the files provide an easy *PostalOne!* gateway. And the **new updating function** dramatically increases mailing flexibility by allowing for last-minute changes in piece weight, job status details or appointment information. Mail Manager 2010 users can now submit the most up-to-date job details without having to use costly third-party Mail.dat packages.

Features and Benefits

- New updating feature provides greater job-detail accuracy with no additional software packages required
- Replaces cumbersome paper USPS reports
- Maintains consistent data file formats
- Easy connectivity to *PostalOne!* system
- Saves time, resources and money
- Supports First Class™, Standard Mail®, Package Services and Periodicals

Your Full Service Solution.

The Mail.dat 2010 option is included as a standard feature in **Mail Manager Full Service**, BCC's premier solution for top-tier mailers. Mail Manager Full Service offers greater processing speed, exclusive functionality and a comprehensive features set. For details, call **(866) 327-9057** today.
